### **Claim Rejections - 35 USC § 112**

Claims 3-7 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 3, line 4, applicant claims that the phosphor layer is composed of a plurality of layers that are of "different kinds" of phosphor glasses. Different-kind of phosphor glasses are not defined. It is not clear as to what are the "different kind" of phosphor glasses. Similar situation also appears in claim 5.

In claim 4, line 3, applicant claims that the phosphor glass is "particle-shaped". It is not clear as to what exactly is "particle-shape". Shape of "particle-shape" is not known.

Regarding claims 3-7, claims 3-7 are informal (see rejection of claims under 35 USC 112, second paragraph) that no meaningful examination can be undertaken at this time. See MPEP 702.01. Note, claims 6-7 are dependent on rejected claim 4.

### **Claim Rejections - 35 USC § 102**

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 and 8 are rejected under 35 U.S.C. § 102(b) as being anticipated by Ota (WO 02/054503).

Regarding claims 1-2 and 8, Ota discloses a light emitting device (figure 1) comprising a light emitting element (4) and a phosphor layer (low melting glass 8 having

divalent europium activated phosphor 11) composed of phosphor glass. Note for claim 8, phosphor glass layer 8 is considered an optical system.

### **Other Prior Art Cited**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ota et al, in US 6943380 disclose a light emitting device having phosphor of alkaline earth metal silicate.

Buchanan et al, in US 5122671, discloses terbium activated silicate luminescent glasses.

Asano, in US 6265825, discloses an up-conversion phosphor glass.

Atagi, in US 6921730, discloses a phosphor layer composition.
